

# Bringing **vision** to veterinary care.

## Engineered for you.

### Deep imaging range.

Scan as deep as 30cm to reliably capture the anatomy you need to evaluate.

### Sharp shallow and mid-depth resolution.

Get a clear picture for more easily interpretable scans.

### Wide field of view.

A broad field of view enables visualisation of full organs on one plane.

## Sharp imaging. **Fast answers.**

Expedite care timelines and help improve outcomes with more actionable insights in your clinic.

### Abdominal small-animal.

Optimised abdominal image quality for confident kidney-length measurement.

### Bladder assessment and treatment.

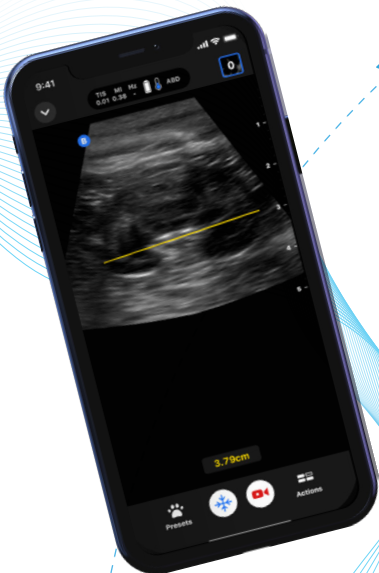

Measure bladder wall thickness and identify urinary stones and masses, with the optimised bladder preset.

### MSK equine.

Rule out cortical deviations with sharper bone surface imaging.

### Colour doppler.

Visualise blood flow for precise cardiac and vascular assessment.

## Precise guidance. **Confident procedures.**

Needle Viz™ technology: on-screen, in-plane needle visualisation for precise aspirates and injections.

## Ultrasound—now on your compatible **Android or iOS device.**

Download the Butterfly app, plug in your device, and select between 12 optimised presets with our intuitive touch-based interface.

## Built to **last.**

Tackle the day with a battery life and continuous run time made for your longest shifts.

## **Connected** care.

- Easily share studies with your clients or colleagues via text or email.
- Automatically integrate scans into any existing system with a secure DICOM connection.

## Start your scanning **education** on day one.

Begin your ultrasound education journey with expert-taught tutorials' right in the Butterfly app.
